About us

Who are we?

The Power of Friendship is a rookie FRC team founded to compete in *FIRST* Robotics Competition, based at Apex Friendship High School in Apex, NC. Founded in 2025 by a group of driven students with a shared passion of robotics and STEM, we hope to make a lasting impact in the robotics community, empower students, and uphold our mission statement.

Our mission

Our team mission is to inspire high school students to be involved in technology and robotics through hands-on activities, teamwork, and innovation. We want to provide students with the opportunity to explore fields of interest in STEM. Simultaneously, we strive to provide STEM opportunities to the youth in our community, fostering inspiration and growth.

What is FRC?

FRC Robotics is a global high school program that brings together students across the world to form teams, plan the entire process from the robot's design to the programming, and ultimately build the robot to play a new game each year. The process occurs in regional and world competitions and the students learn through a fast-paced, mentor-supported environment, where STEM, teamwork, and project planning are some of the skills acquired. Each of the teams is provided with a kit of parts and the time frame to create the robot is approximately 6-8 weeks, starting from the announcement of the challenge each January.

Subteams

At FRC, we have several subteams so that you can work in your own specialized area of interest.
